adventure +

symmetry+ natural timber play equipment

For over 35 years, adventure+ has designed, manufactured and installed timber play equipment for a vast range of applications around Australia, including schools, public parks and early learning centres.

symmetry+ utilises White Cypress timber as the main structural element, and it is particularly popular in high profile architectural playgrounds or where aesthetic considerations are important. The main accessory components are constructed from galvanised and powder coated steel for its strength, versatility and colour potential, with other materials utilised to best suit each application.

Australian Timber & Australian Made

Using local timber that suits the local climate lasts longer and requires less maintenance.

Unique, Cutting Edge Stirrup Design

Our stirrup system has a sleek design that is colour matched to the timber colour.

Customise to Make it Your Own

Timber provides greater scope for customisation, allowing you to create something unique.

Range of Timber Colours

A range of timber colours is available, including Old Gold, Jarrah, Spotted Gum and Walnut.

Past projects

With extensive experience in providing playground adventures for thousands of children, **adventure+** has a proven track record of high equipment quality, innovative playground design, Australian Standards compliance and impressive service.

Play Unit Concepts

The following pages showcase a small selection of timber play unit designs. The beauty of the **symmetry+** timber playground system is its flexibility. Provide us with your site details, budget and special requirements, and our team will create a unique design for you.

Make it your own playground

One of the outstanding features of playground design by **adventure+** is the ability to achieve something unique and special. While standard play unit layouts will suit many applications, high profile locations often deserve a customised approach.

Endless possibilities...

Layout

Create a play unit layout that suits your site, budget and special requirements.

Cladding

Explore unique looks with timber panelling and special features.

Colours

A large range of timber and steel colours is available for you to mix and match!

Play Components

Remove or replace play activities like roofs, slides, climbers and more!

Materials

Change the material from timber to steel, or to composite!

Much more...

The flexibility of our system allows you to add special features unique to your playground!

Cutting edge stirrup system

The **adventure+** timber play equipment stirrup boasts a cutting edge, strong and aesthetically pleasing design. It features a fully engineered spigot concealed inside the timber upright to maximise durability, and a powder coat colour finish matched to the timber upright, which makes it almost invisible!

White Cypress, a local timber suited to local conditions

adventure+ has been using White Cypress in play equipment for over 20 years due to its high durability and low shrinkage rate.

In an Australian setting, we recommend using a native Australian timber for play equipment. Imported timbers are generally tested and classified based on less harsh environments than Australia, such as the European environment, and therefore cannot be accurately compared to Australian timbers.*

	White Cypress	Jarrah	Spotted Gum
In-ground life expectancy	Reasonably High (15-25 yrs)	Reasonably High (15-25 yrs)	Reasonably High (15-25 yrs)
Above ground life expectancy	High (More than 40 yrs)	Reasonably High (15-40 yrs)	High (More than 40 yrs)
Durability	High	Reasonably High	High
Shrinkage	Very Low	High	Medium
Borer Susceptibility	Not Susceptible	Susceptible	Susceptible

Range of timber colours

All **symmetry+** play units are supplied with the timber coated in Old Gold colour unless otherwise specified. When specifying uncoated timber, please be aware that it will be more susceptible to weathering. Different coating colours can be used on different components in the same play unit.

Special features

Unique and special features can be incorporated into a playground design, and can give a playground an entirely different look and feel.

A sustainable, greener choice

For the environmentally conscious playground purchaser, timber is a logical choice. Sustainable yield harvesting requires planting at 2:1 or 3:1 ratios, which means that despite the usage, there is an increasing level of raw material resource. Furthermore, managed plantation timbers for manufacturing absorb CO² during the growing phase, thereby reducing emissions into the atmosphere. The harvesting and processing of timber requires a fraction of the energy when compared to steel and aluminium, which require 24 and a massive 126 times more per tonne respectively.
